DATE:

**SERVLET-WEB FORM THAT ACCEPTS USER NAME AND AGE AND
DISPLAY IT BACK ON THE BROWSER USING SERVLET**

AIM:

To create a web form that accepts the user name and age and to write a servlet to process the form and display it back on the browser.

PROGRAM:-

login.html

```
<!DOCTYPE html>
<html>
<head>
<meta charset="UTF-8">
<title>Insert title here</title>
</head>
<body>
<h1>LOGIN</h1>
<form action="/Janani_V_R_65/Login" method="get">
<label for="uname">USERNAME:</label>
<input type="text" id="uname" name="uname" placeholder="Enter Username" required/>
<label for="age">AGE:</label>
<input type="number" id="age" name="age" placeholder="Enter Age" required/>
<button type="submit">SUBMIT</button>
</form>
</body>
</html>
```

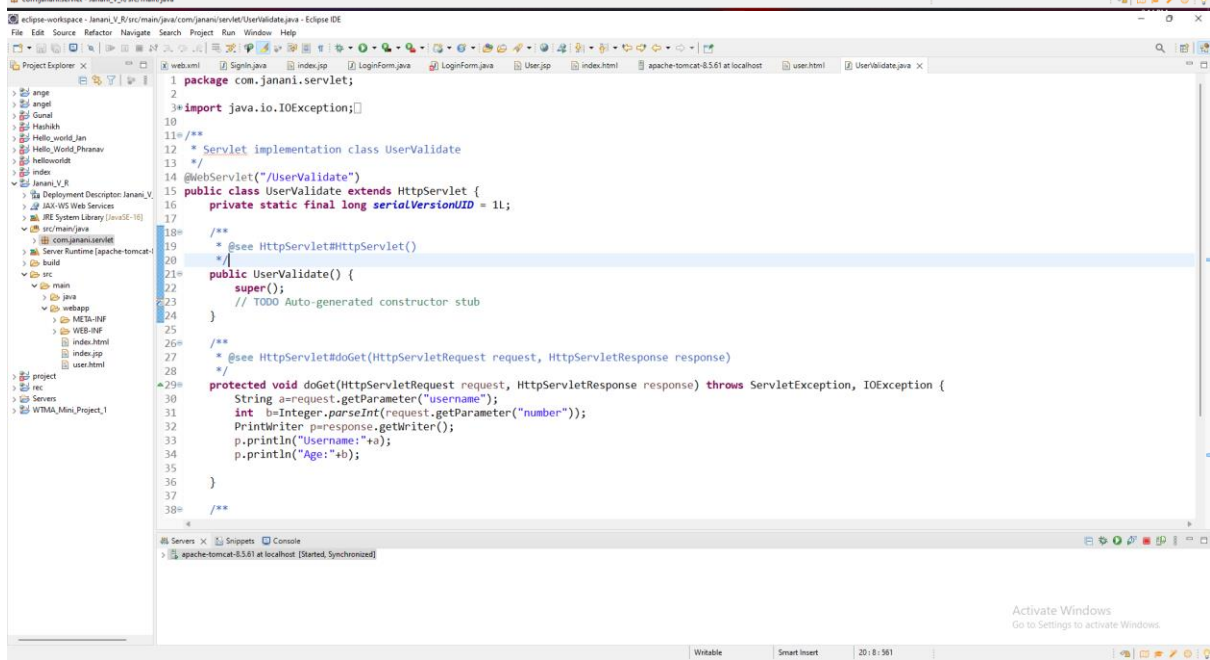

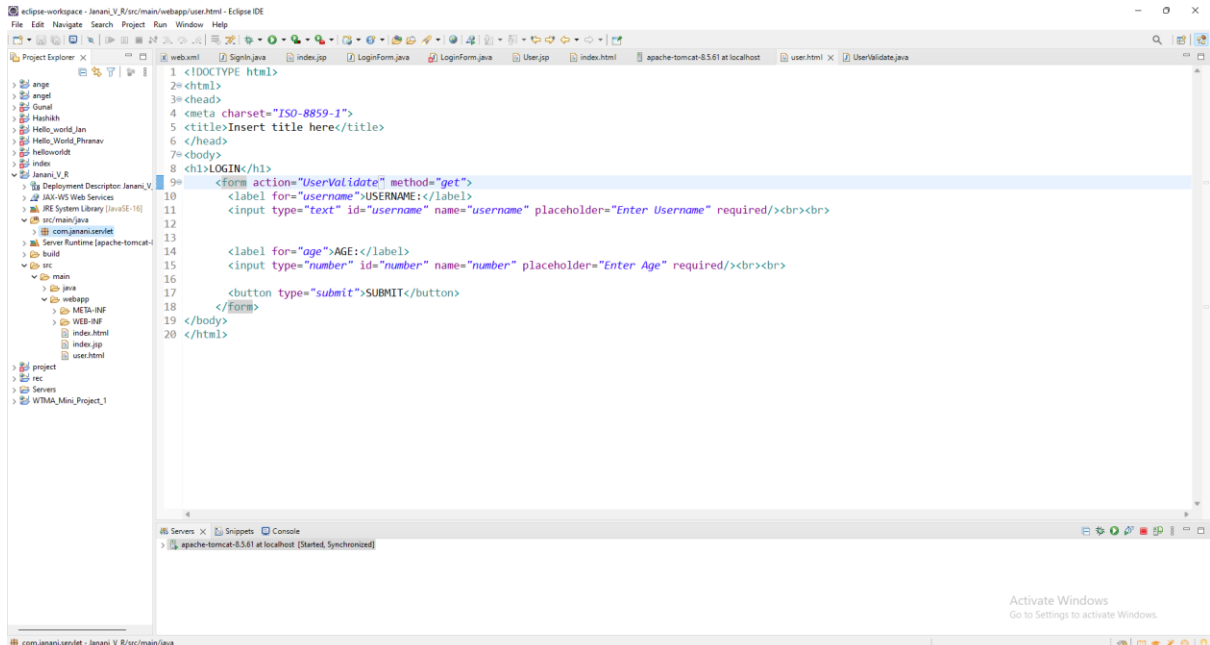

Login.java

```
package com.janani.servlet;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.annotation.WebServlet;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
@WebServlet("/Login")
public class Login extends HttpServlet {
    private static final long serialVersionUID = 1L;
    public Login() {
        super();
        // TODO Auto-generated constructor stub
    }
    protected void doGet(HttpServletRequest request, HttpServletResponse
response) throws ServletException, IOException {
        String a =request.getParameter("uname");
        int b=Integer.parseInt(request.getParameter("age"));
        PrintWriter p=response.getWriter();
        p.println("Username:"+a);
        p.println("Age:"+b);
    }
    protected void doPost(HttpServletRequest request, HttpServletResponse
response) throws ServletException, IOException {
```

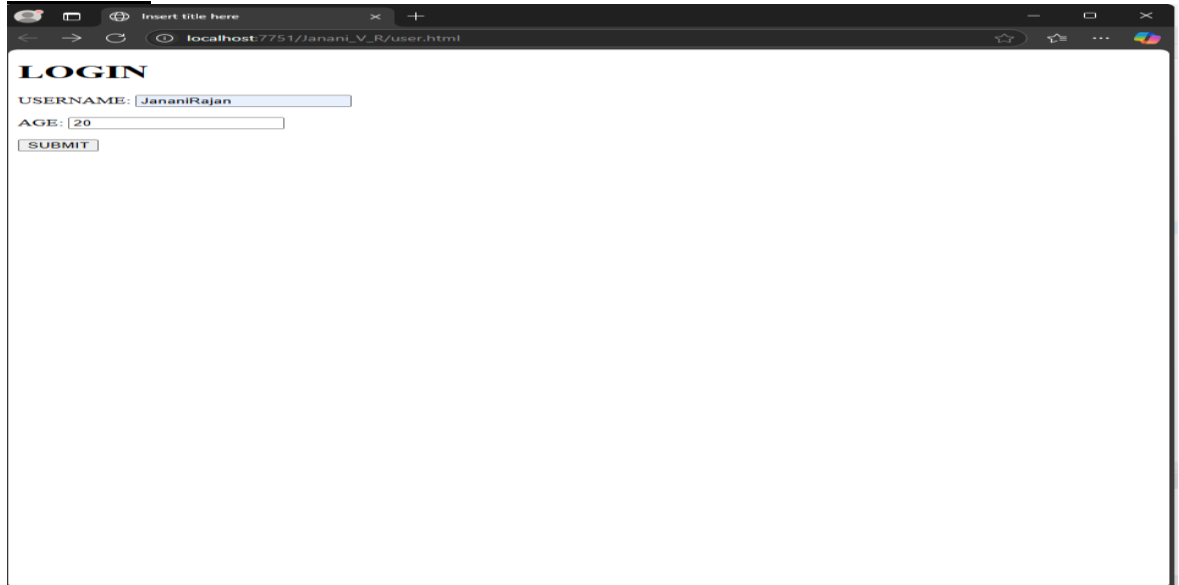

```
// TODO Auto-generated method stub
doGet(request, response);
```

```
}
```

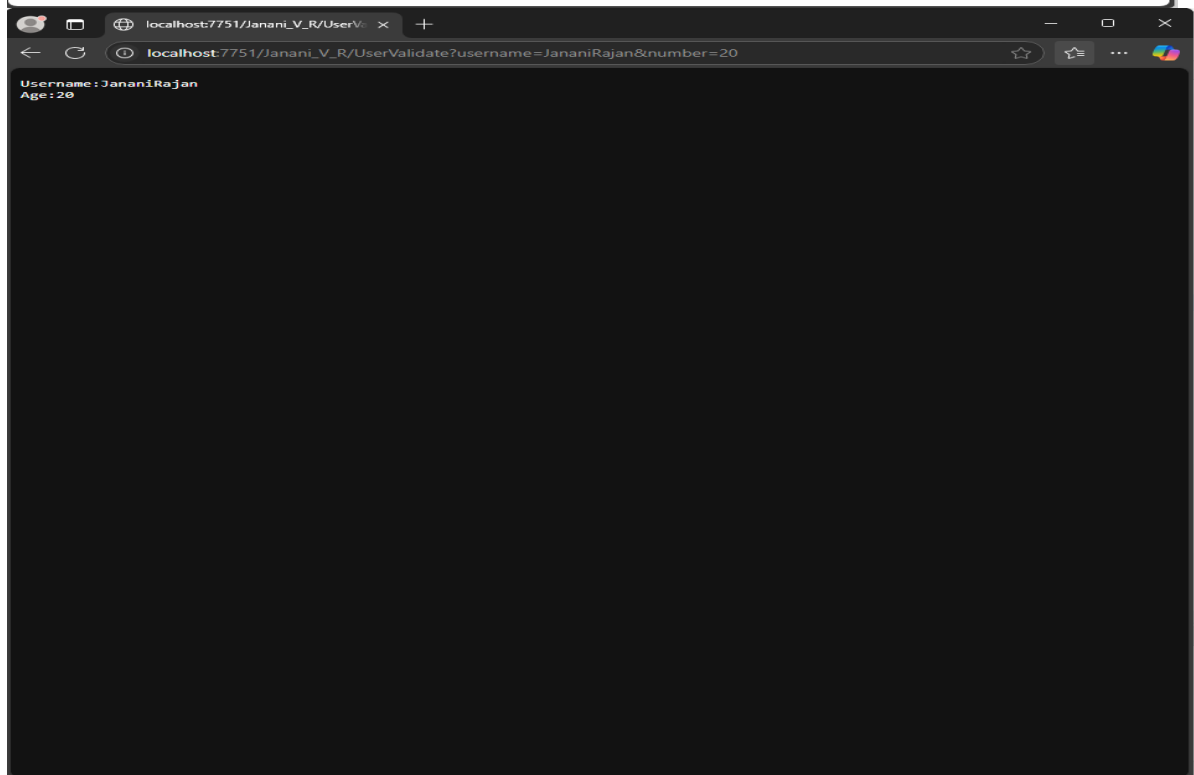

```
}
```

OUTPUT:

A screenshot of a web browser window. The address bar shows 'localhost:7751/Janani_V_R/user.html'. The page has a title 'Insert title here'. The main content area displays a login form with the heading 'LOGIN'. Below the heading, there are two input fields: 'USERNAME:' with the value 'JananiRajan' and 'AGE:' with the value '20'. A 'SUBMIT' button is located below the age field.

RESULT:

Thus the servlet program to accept and display the user name and age is implemented successfully.
